

Project Summary

Professional Office Building – Evergreen

Situation

A southwest-style office building was built in a commercial location in Evergreen. The owner sought a stucco professional to ensure a quality exterior application.

Challenge

The building required a cold weather construction schedule, tenting and heat. In addition, the foothills location had potential for woodpecker damage if not planned properly. The owner also had very stringent requirements for the stucco color tint.

Result

The owner was very satisfied with the work done by AGS. The texture and color desired was achieved. Our portion of the project was completed on time and on budget.
